

Overview

Automate document-intensive business processes, to drive revenue, increase operational efficiency, reduce risks and deliver superior customer service.

Customer Value

Increase profits by reducing wasted labor and indirect costs associated with paper-based processes

Improve organizational productivity by enabling employees to rise to the challenge of being asked to do more with less

Deliver superior customer service by empowering employees to quickly find and access the right documents at the right time

Reduce risks and increase compliance with federal, state and regulatory policies

Enterprise Content Management for the Oil and Gas Industry

Reduce costs, expedite processes, increase operational efficiency and ensure regulatory compliance

KnowledgeLake enables organizations in the Oil and Gas sector, both upstream and downstream, to successfully control processes that can mitigate risk and control project lifecycles by streamlining mission-critical processes.

Ensure regulatory compliance and reduce risks

A massive amount of controlled documentation is necessary in the Oil and Gas industry, where a mistake at any level can affect a human life or your organization's reputation. At KnowledgeLake, we understand the careful planning, tight communication and the level of integration needed to comply with industry standards. Our solutions adhere to ever-changing regulatory frameworks to guarantee consistent and timely management of documents to facilitate easier audits, ensure compliance and prevent costly legal battles.

Automate processes and increase operational efficiency

Operational excellence is vital in the oil and gas industry, where prices are unpredictable, demands are ever-increasing and strong scrutiny dwells. Accurate document management is crucial for you to manage and maintain your plants, installation, refineries and other assets. In order to not only survive, but thrive, in the competitive space, organizations need to make their information more intelligent, their processes leaner and their assets more cost-efficient. With KnowledgeLake you can encourage quicker and more efficient inter-departmental processing through automation, allowing your knowledge workers to make more informed and timely decisions.

Leverage integration to increase the speed of business

Too often employees have to access disparate systems, in addition to file cabinets, file shares and more, to make decisions and service internal and external customers. KnowledgeLake's integration capabilities enable a central repository to store and link documents to the customer interactions that fuel your business. With the ability to integrate with your Land Lease, Well File Management, Human Resources, Accounting and other systems, KnowledgeLake streamlines access to invoices, contracts, records, reports and other critical documents. Experience a secure and centralized document repository that makes search and retrieval far more lucrative and easy during inspections and audits.

*AIIM 2012

BUT DON'T JUST TAKE OUR WORD FOR IT...

*When we were storing content over all of those network drives, we estimated that employees were spending up to 25 percent of their time searching for content. A typical search in the past might have taken 15 minutes. **Now, in just a minute or so and a couple of clicks, the employee has the information in hand.** With KnowledgeLake, SharePoint, and FileTrail, employees can be far more efficient*

Ronald McAdams, Business and Software Analyst | Black Elk Energy

*It is flexible enough to allow for growth, but precise enough to enable rapid searches. We have several search filters and options to view and find documents. **Most users quickly find the documents that they are searching for in a matter of minutes.** Speaking for myself, KnowledgeLake's solution for our document management library has greatly simplified my ability to find the documents that I need on a daily basis*

Jerry Levy, Vice President of Administration | Invenergy

Maximize Your Investment in Microsoft Technology

Transform SharePoint into an **easy-to-use, powerful and scalable ECM solution**

Manage corporate content and collaborate more effectively

Familiar Microsoft-like user interface requires little end-user training

Encourage **process consistency and repeatable outcomes** with ease

Leverage the software and hardware you already own and successfully meet business needs for risk mitigation, security and flexible deployment options
